

# AiRMAPS 2024-26

## Airborne and Remote Sensing Methane and Air Pollutant Surveys

### U.S. O&G Methane Emissions

#### **NOAA Office of Atmospheric Research (OAR)**

Chemical Sciences Laboratory (CSL): Steven Brown, Brian McDonald, Sunil Baidar, Carsten Warneke

Air Resources Laboratory (ARL): Xinrong Ren, Winston Luke

Global Monitoring Laboratory (GML): Colm Sweeney, Arlyn Andrews, Jeff Peischl

Climate Program Office (CPO): Monika Kopacz, Annarita Mariotti

#### **NOAA National Environmental Satellite, Data and Information Service (NESDIS)**

Center for Satellite Applications and Research (STAR): Shobha Kondragunta

National Centers for Environmental Information (NCEI): Jeff Privette

# AiRMAPS 2024-26

## Airborne and Remote Sensing Methane and Air Pollutant Surveys

### Objectives

1. Establish a current top-down evaluation of U.S. oil and gas (O&G) methane and air pollutant emissions;
2. Demonstrate the use and value of a tiered, integrated satellite, airborne and ground-based greenhouse gas (GHG) observing system;
3. Evaluate civilian and commercial spaceborne remote sensing methods and long-term monitoring for methane, other GHG and air pollutants; and
4. Quantify GHG and pollutant emissions and impacts from downstream O&G end use in urban testbeds.

#### Disclaimer:

AiRMAPS 2026 deployment is dependent on funding and aircraft availability and subject to change

# Tiered Observing System for Emissions Quantification

**NOAA OAR (CSL, ARL, GML, CPO):**  
3-5 year deployments of Twin Otter and P-3 aircraft

**NOAA NESDIS:** Partner with airborne observations to augment and validate satellite based air pollutant (UV-VIS) and GHG (SWIR) instruments

**Partners:** Collaboration with federal and state agencies, academic partners, industry, and stakeholders

**NIST**

# NOAA Airborne Platforms

NOAA P-3

NOAA  
Twin Otter

## NOAA WP-3 Heavy Aircraft O&G Payload- AIRMAPS 2026

## NOAA Twin Otter Light Aircraft Payload AIRMAPS 2024-28

- NOAA **P3 heavy aircraft**: full payload for complete measurements of GHG, AQ and other pollutants (incl. HAPS)
- NOAA **Twin Otter light aircraft**: smaller payload for GHG, NO<sub>x</sub>, O<sub>3</sub> and other tracers
- Both aircraft: Doppler wind lidar for dynamics & transport

# NOAA Airborne Platforms

NOAA P-3

NOAA WP-3 Heavy Aircraft O&G Payload- AIRMAPS 2026

## **NOAA CSL confirmed payload:**

GHG, NO<sub>x</sub>/O<sub>3</sub>

VOCs (cans GC, PTR-MS, fast ethane)

I-CIMS

aerosol size and composition, BC

## **Not confirmed (partners or CSL):**

Wind lidar

HCHO

NH<sub>3</sub>

## **Source apportionment and AQ impacts:**

ethane, NH<sub>3</sub>, alkanes

oVOCs, Cl-species

- NOAA **P3 heavy aircraft**: full payload for complete measurements of GHG, AQ and other pollutants (incl. HAPS)
- NOAA **Twin Otter light aircraft**: smaller payload for GHG, NO<sub>x</sub>, O<sub>3</sub> and other tracers
- Both aircraft: Doppler wind lidar for dynamics & transport

# In-situ Airborne Methods for Quantifying Emissions

## Mass Balance

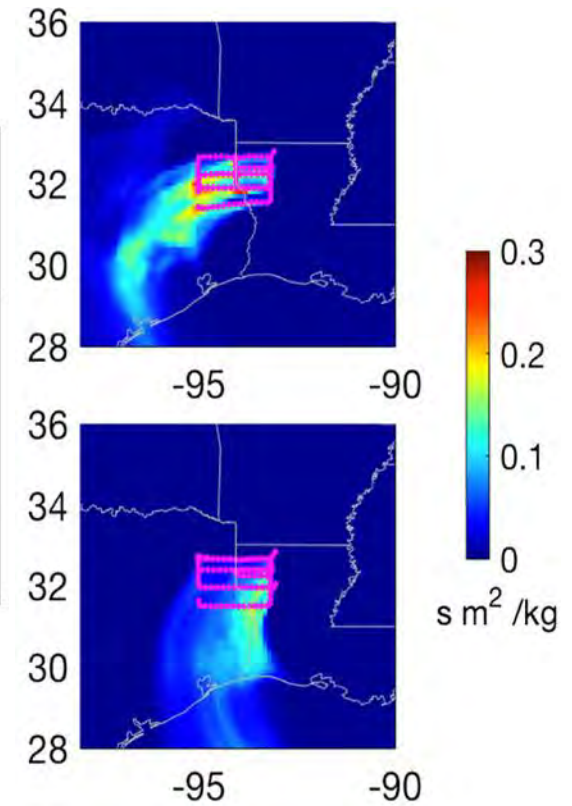

## Eddy Covariance

## Tracer Relationship

## Inverse Modeling

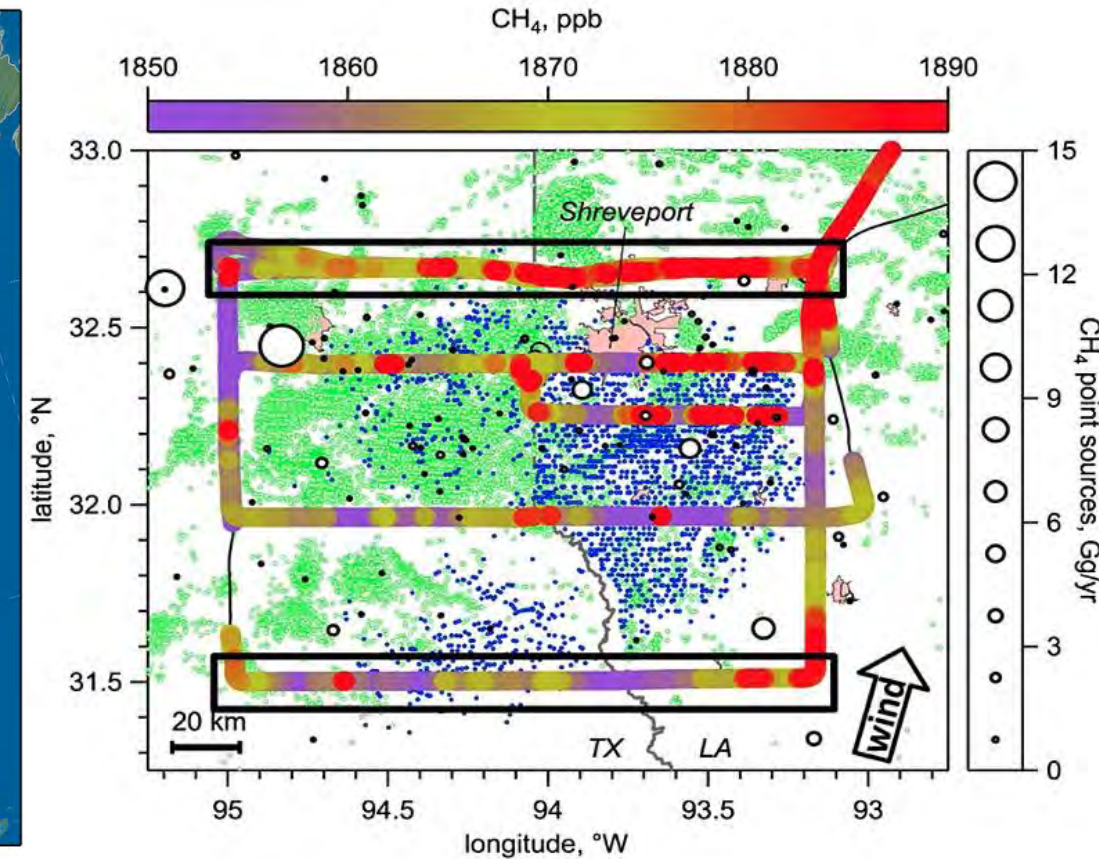

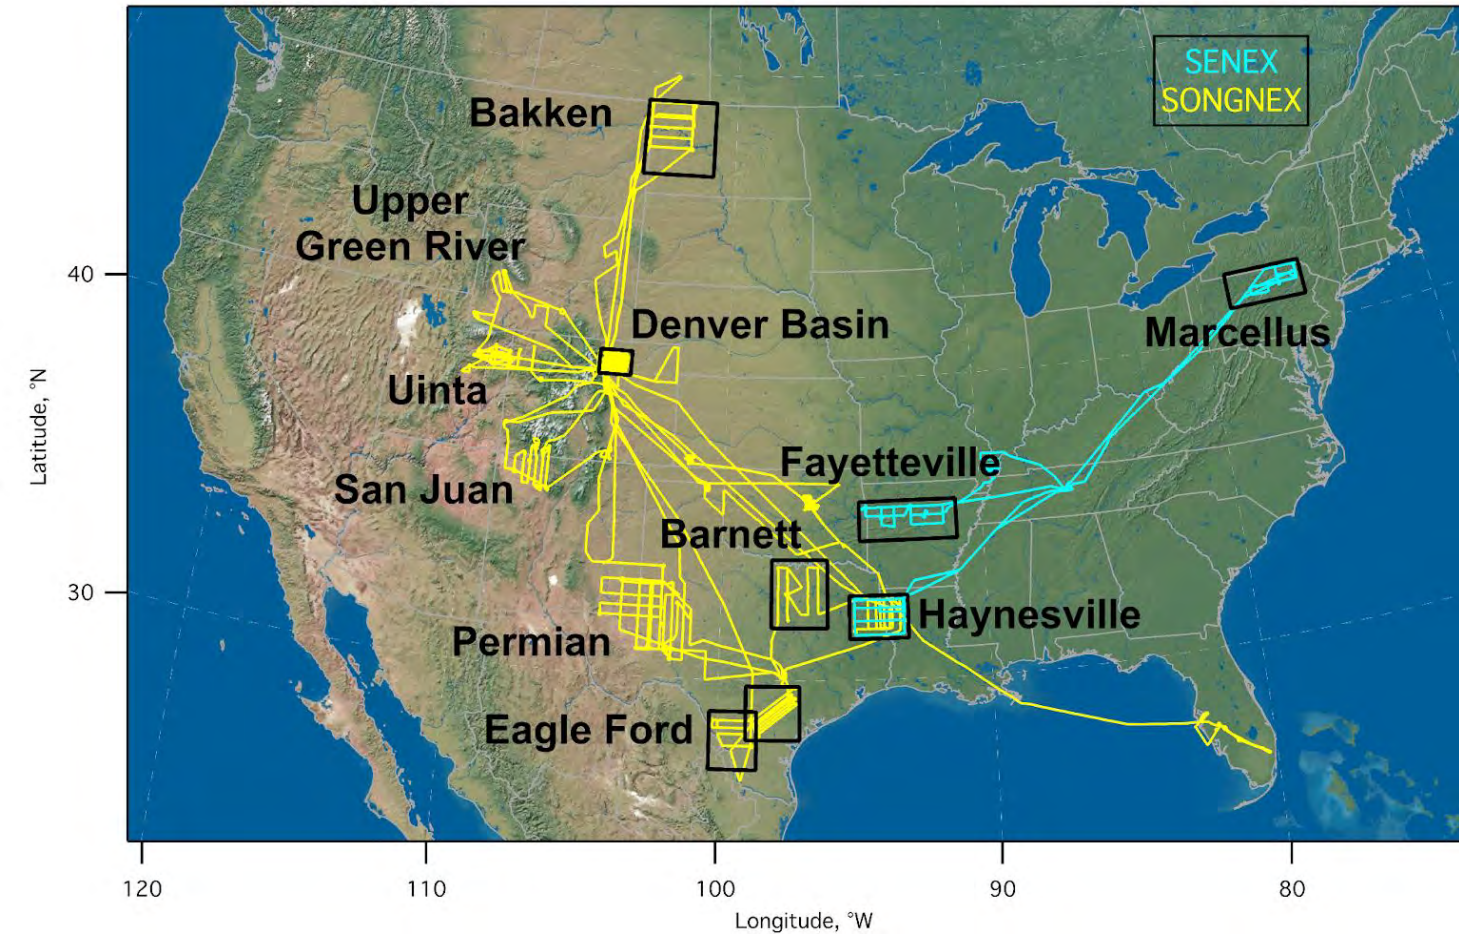

- NOAA CSL has used all four methods for emissions quantification using airborne, multi-species measurements
- Incorporation of Doppler lidar for wind fields and boundary layer depth improves mass balance

# Previous O&G Measurements

Peischl et al 2015

Mass balance and eddy  
covariance flights

# Previous O&G Measurements

Gilman et al 2013

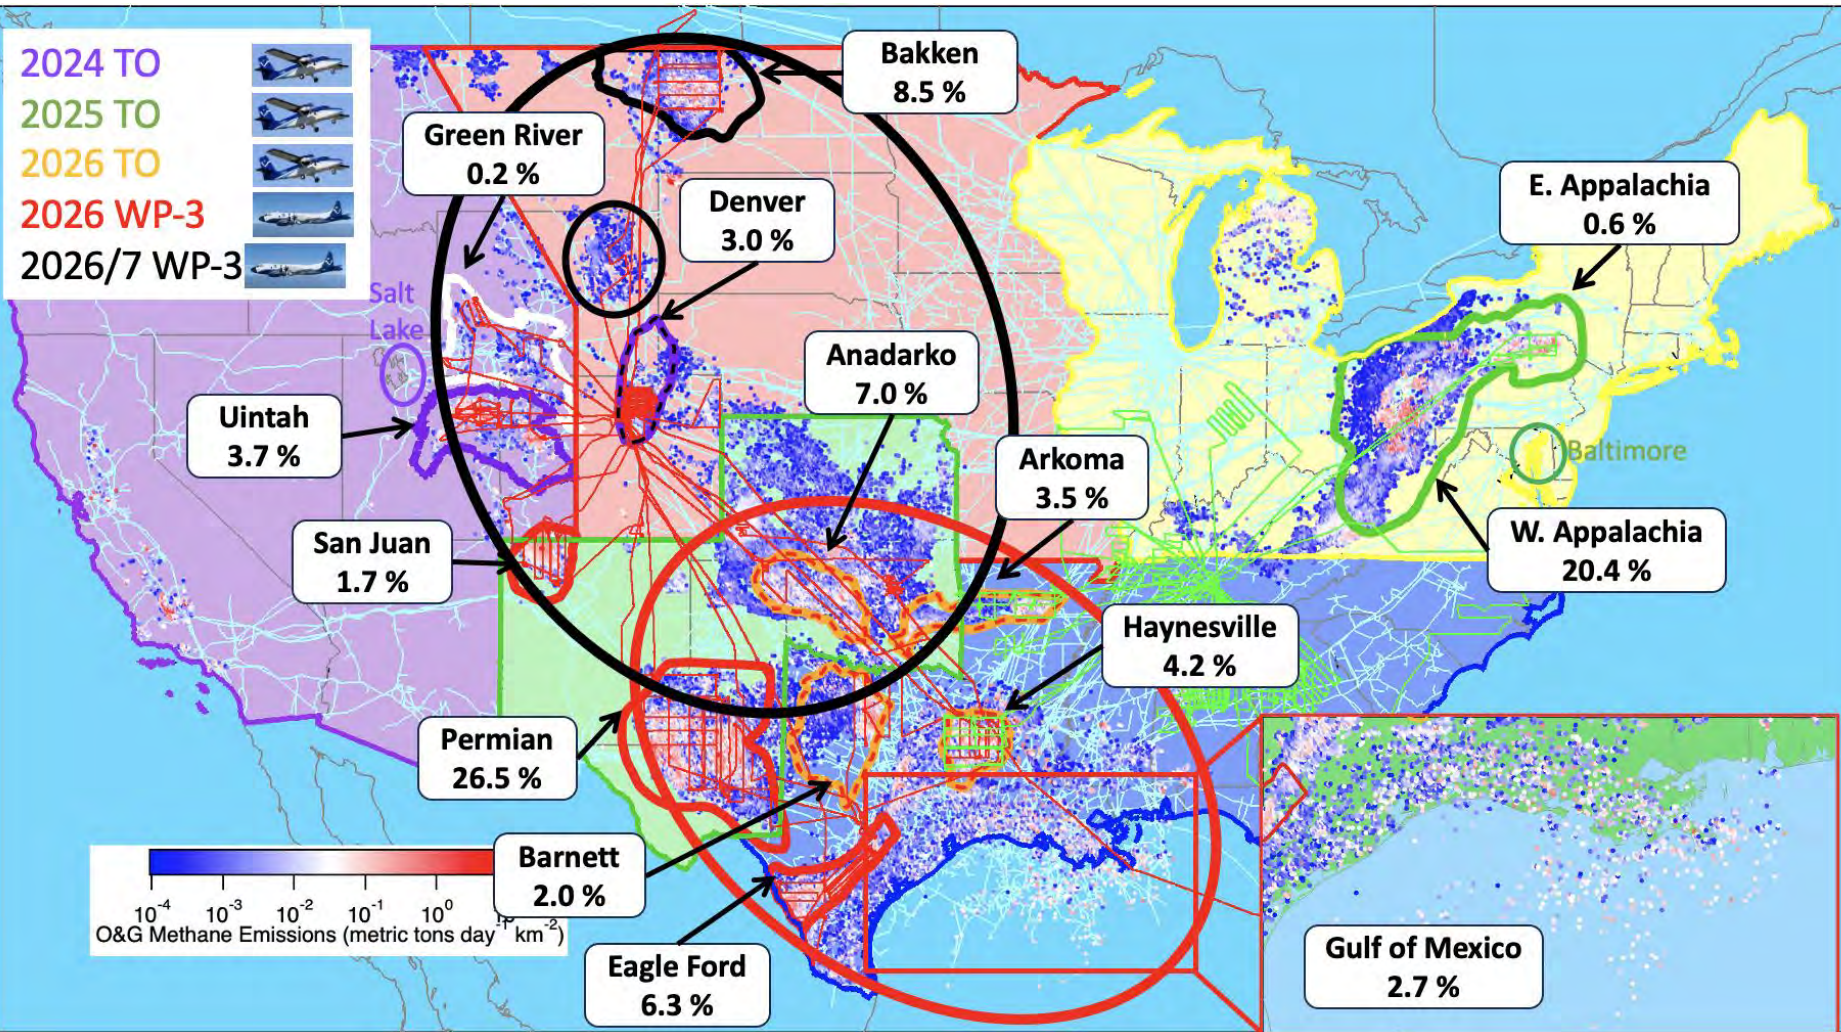

NMHC composition and  
AQ measurements

Source apportionment in the LA Basin for methane,  
Schafer et al 2013 ethane and propane from three aircraft data sets

# Airborne Survey Strategy & Proposed Schedule

- 150 P3 and TO flight hours out of Austin, TX
- Include off-shore
- Spring 2026 (anticipated)

**2024**

Oil & Gas: Denver  
Julesburg Basin, CO

Urban: Salt Lake City, UT

**2025**

Oil & Gas: Southwest  
Marcellus Shale

Urban: Baltimore – DC

**2026**

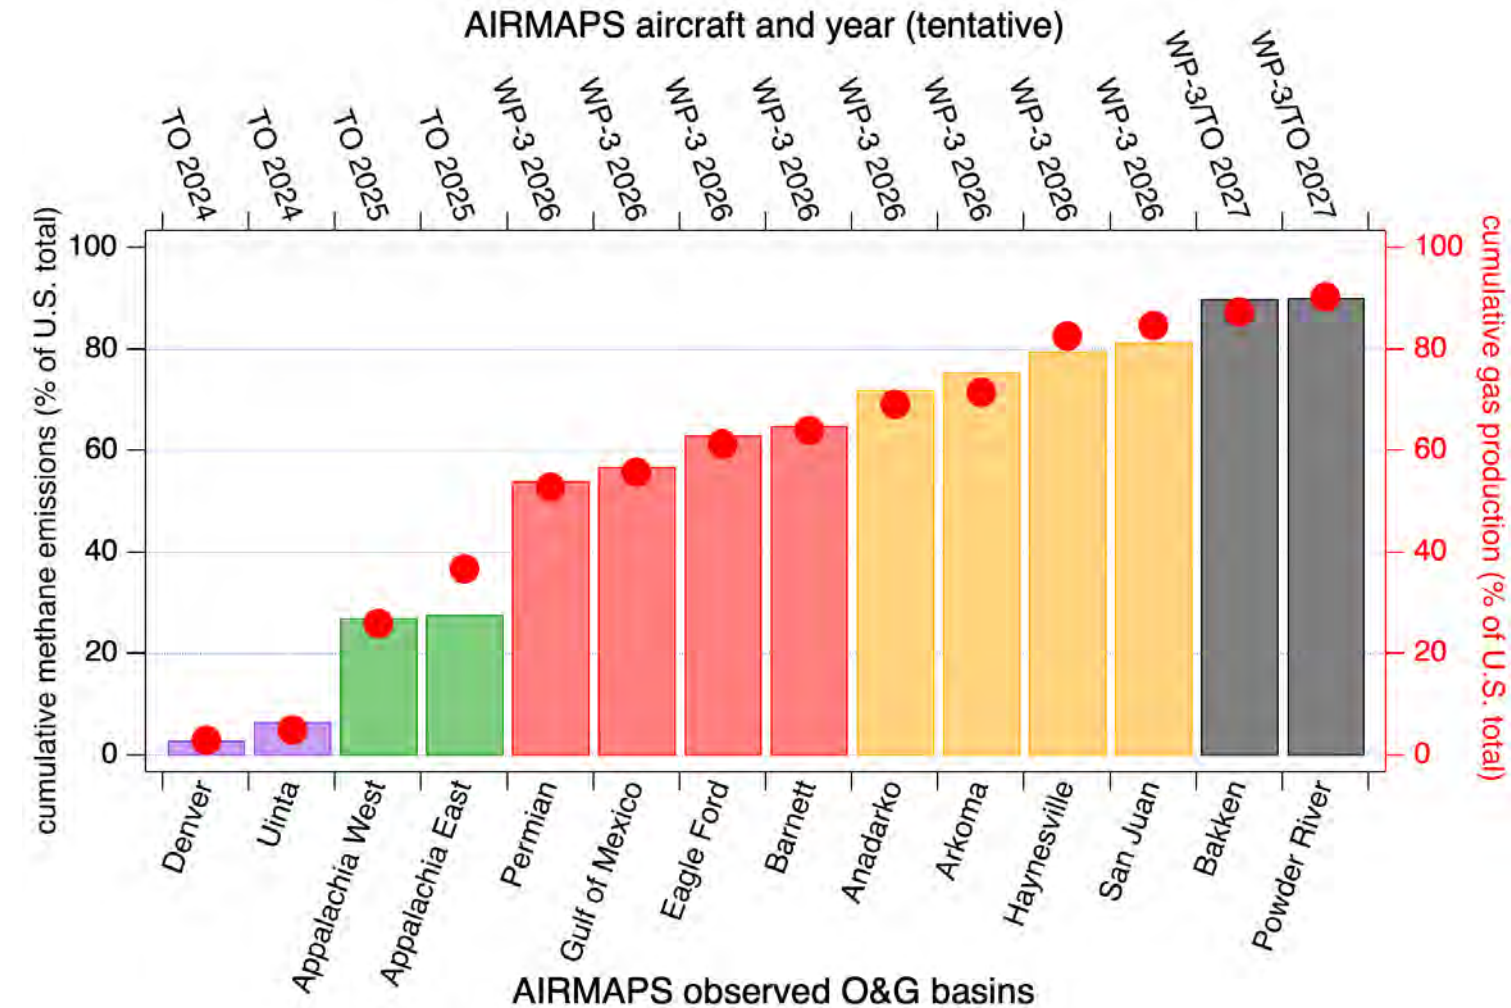

Oil & Gas: TX, OK, LA,  
AR, Gulf of Mexico

Urban: Texas

# Airborne Survey Strategy & Proposed Schedule

## O&G targets with P3 and TO:

- Tier 1: ~4 flights
- Tier 2: 2-3 flights
- Tier 3: >1 flight

## Targets within each basin:

- regional surveys (on-shore and off-shore)
- point sources (compressor station, liquefaction, ...)
- pipelines and junctions

## Other targets:

- coal mines, landfills, CAFOs, urban
- air quality implications (incl. urban, rural, and EJ)

Two aircraft platforms (Twin Otter and P-3) plan to survey ~ 90% of U.S. O&G methane emissions

# Airborne Survey Strategy & Proposed Schedule

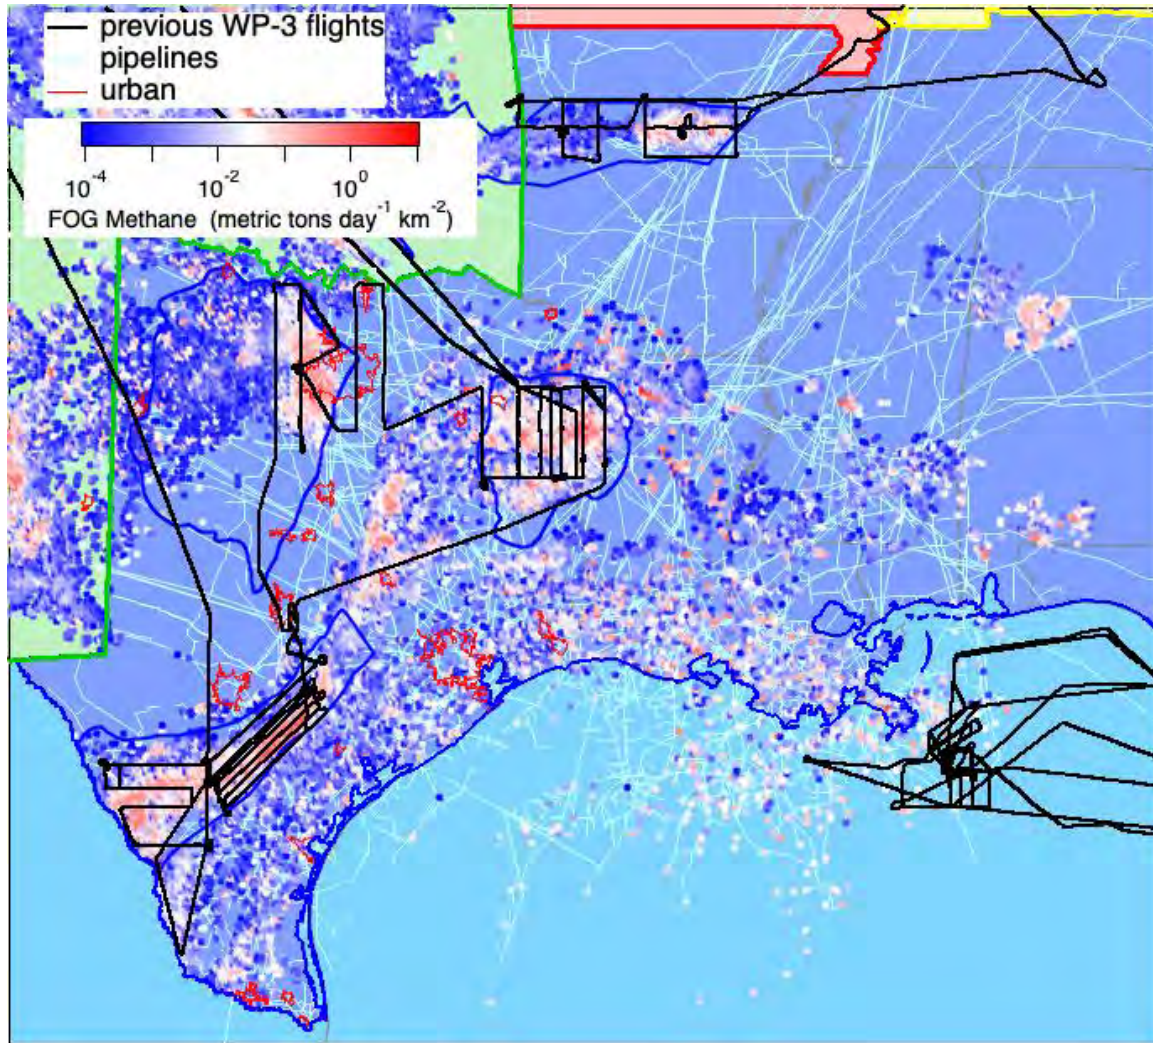

2024 (Twin Otter 150 h)			
~7 x Denver ~14 x Salt Lake (Jul-Aug)	O&G Tier 1 ~ 7 flights	O&G Tier 2 ~ 4 flights	Urban Tier 1 ~ 10 flights
	DJ Basin	Uinta	Salt Lake
2025 (Twin Otter 150 h)			
~20 x DC/Balt. (July-Aug)	O&G Tier 1 ~ 10 flights	O&G Tier 2 ~ 10 flights	Urban Tier 1 ~ 10 flights
	Southwest Marcellus	Northeast Marcellus	DC/Baltimore
2026 (Twin Otter 150 h)			
~20 x Austin (late spring)	O&G Tier 1 4-5 days each	O&G Tier 2 3-4 days each	O&G Tier 3 1 day each
	Anadarko	Barnett	Permian
	Haynesville		Eagle Ford
	Arkoma		
2026 (WP-3 120-150 h)			
~20 x Austin (April)	O&G Tier 1 4 flights each	O&G Tier 2 3 flights each	O&G Tier 3 1 flight each
	Permian	Barnett	Arkoma
	Offshore Gulf	Eagle Ford	Haynesville
			Anadarko
2026 or 2027 (WP-3 50 h)			
~5 x Broomfield (October)	O&G Tier 1 4 flights each	O&G Tier 2 1-2 flights each	
	Bakken	DJ Basin	
		Green River	

Two aircraft platforms (Twin Otter and P-3) plan to survey ~ 90% of U.S. O&G methane emissions

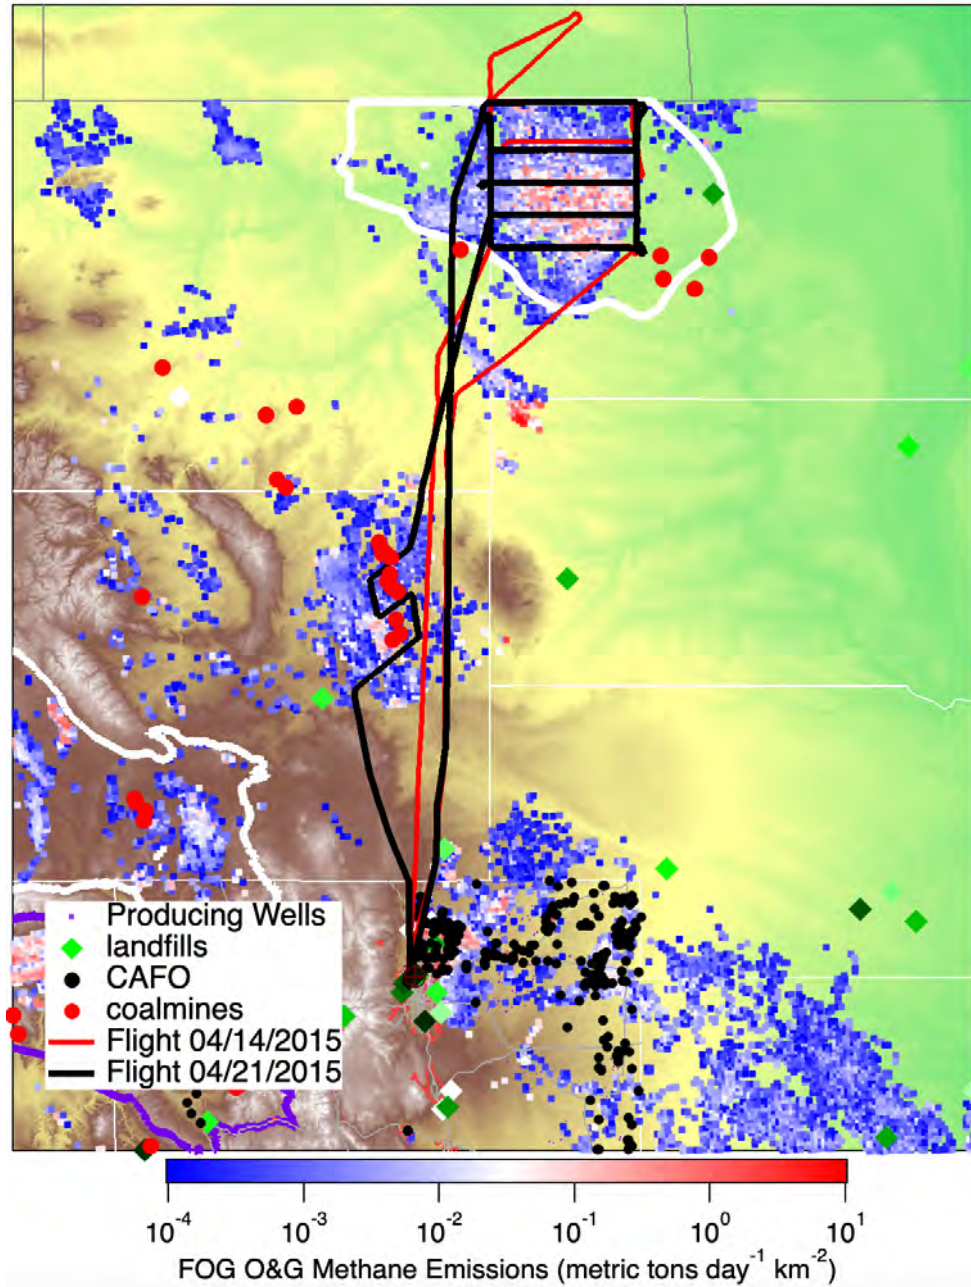

# Flight Strategy out of Austin

# Flight Strategy for Bakken

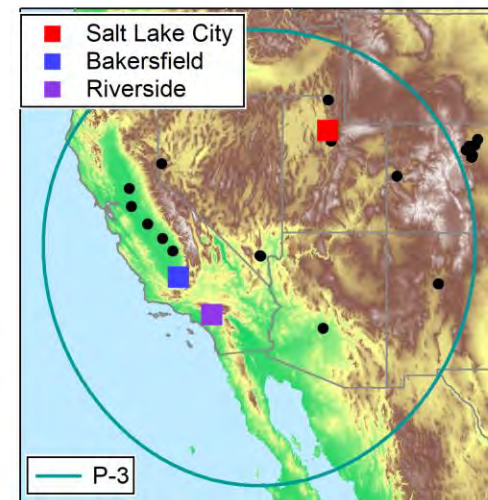

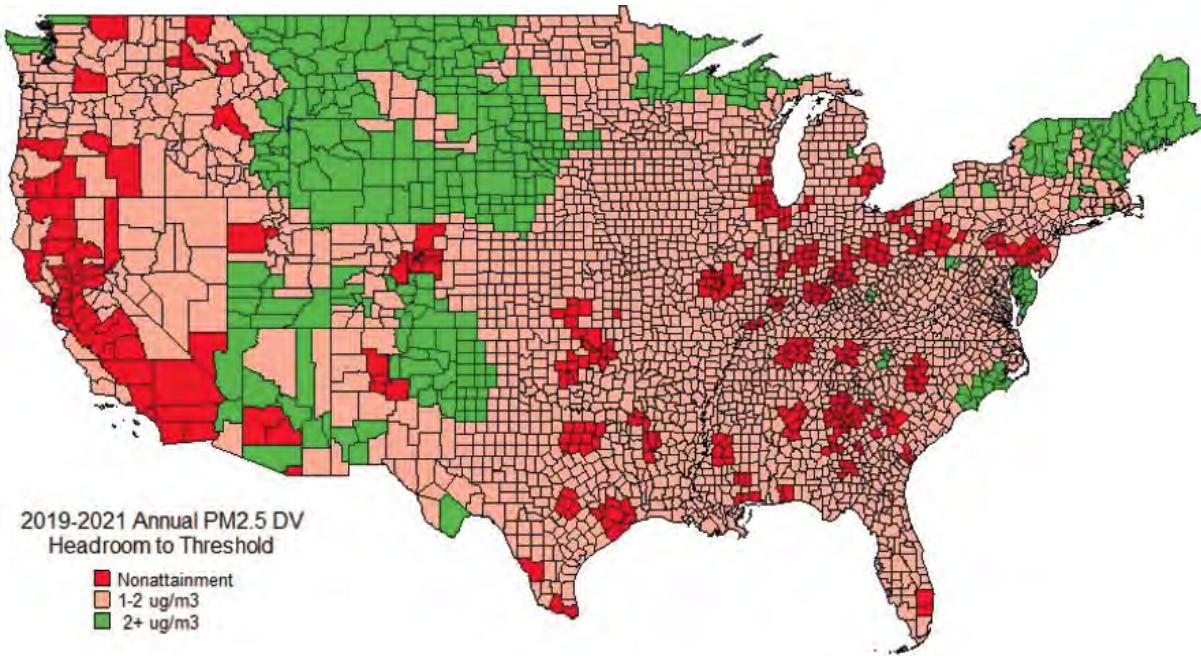

## Bakken most uncertain:

- Suitcase flights in 2026 or extra flights in 2027
- DJ and Green River on the
- pipelines and junctions
- AQ implications (incl. urban, rural, and EJ)

# AiRMAPS 2026-28 Urban: Southwest U.S.

Hallar et al., BAMS 2021

Stella Environ. Mag. 2023

Counties in non-attainment with new 9  $\mu\text{g m}^{-3}$  annual PM standard

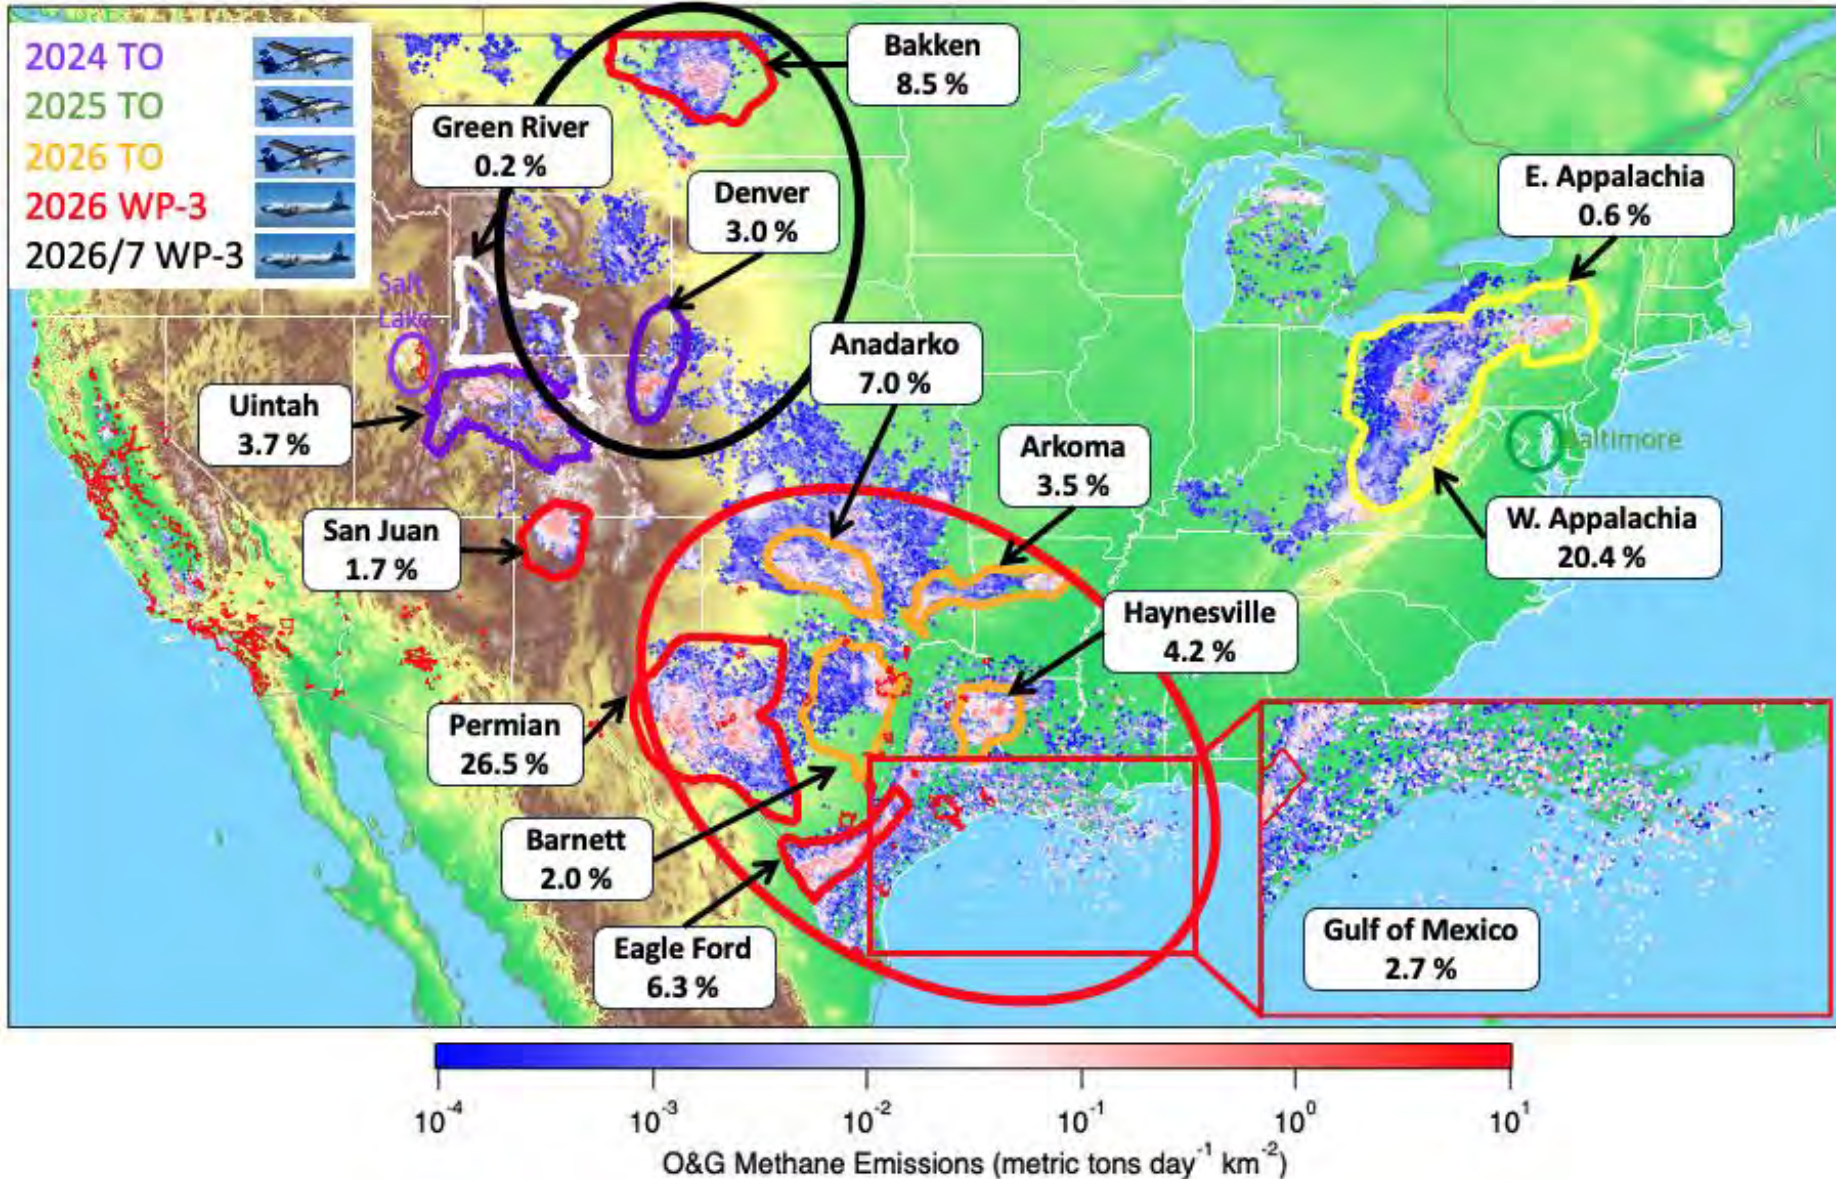

High winter season PM in western U.S.

Collaborative with NSF

# Airborne Survey Strategy & Proposed Schedule
