

An overview of the POSIDON campaign and POSIDON/ATTREX-3 comparisons

Eric Jensen

I will provide a summary of the POSIDON campaign, including a brief description of the science goals and payload, as well as statistics of the horizontal and vertical sampling provided by the flight paths. I will also briefly compare the sampling statistics, cloud properties, and relative humidities between the POSIDON and ATTREX-3 (2014 Guam) campaigns. Pointers to presentations providing more detailed comparisons will be provided.
